Hi Andrew,

No good deed goes unpunished!

If you can't answer these questions, just say so. The %50 percent capacity data is from EPA 0800 management report. I understood it to mean it should be or it is estimated that it will be at %50 capacity by noon today. If you don't know how many customers are or are not being served that's fine just say so. I don't remember that there was a back-up plant but if you know, great.

Thanks Bill

Thank you, this is very helpful. Can you and ESF #10 clarify – does this mean that the primary water plant is at 50% operational capacity today? If so, does this equate to a certain percentage of households being able to have drinking water capabilities? Also, do we know what the status is of the secondary/backup water plant – is that also being worked on in parallel to the primary?

Spoke in coordination with ESF-10 who received information from Region VI.

Beaumont, TX drinking water is estimated to be at 50% capacity by noon today.

Beaumont wastewater plant is still undergoing concerns. ESF-10 can provide more detail.

State of Texas Commission of Environmental Quality (TCEQ) is working thru District Disaster

Community regarding Sodium Hydroxide levels that determine proper PH.
